MORE FROM QUESTIONSANSWERED.NET In this section: Office of Prescription Drug Promotion FDA Archive About FDA Accessibility Visitor Information Website Policies / Privacy No FEAR Act Back to Top As with all social sciences studies, conclusions from one researcher shouldn't necessarily be taken as gospel, but they're helpful for advancing the body of knowledge in a given field. The researcher then collects data, either through observation or data research, and starts connecting the dots to find underlying behaviors or impacts of the sample group's behavior. Gather Evidence During the study period, the researcher gathers evidence to back the observed patterns and future claims that'll be derived from the data. This might be a question about why college students are prone to certain eating habits or what mental health problems afflict house fire survivors. Since case studies are usually presented in the professional environment, it's not enough to simply have a theory and observational notes to back up a claim. For that purpose, they're an invaluable way of gathering new material and presenting ideas that others in the field can learn from and expand upon. Case studies can be found in many fields, particularly across the social sciences and medicine. Please help us to share our service with your friends. Instead, the researcher must provide evidence to support the body of study and the resulting conclusions. Present Findings As the study progresses, the researcher develops a solid case to present to peers or a governing body. Case 1: Post Traumatic Stress Disorder Case 2: Pre-Surgical Evaluation and Management of the Older Patient Case 3: Giant Cell Arteritis - One Geriatrician's Experience Case 7: An Unusual Case of Syncope Case 8: An Older Woman with Oliguria: Prevention of Contrast-Induced Nephropathy Case 9: A Case of Depression in a Patient with Dementia Thank you for interesting in our services. We need your help to maintenance this website. When you conduct a case study, you create a body of research based on an inquiry and related data from analysis of a group, individual or controlled research environment. As a researcher, you can benefit from the analysis of case studies similar to inquiries you're currently studying. The presentation might be formal or casual, depending on the case study itself. Draw Conclusions Once the body of research is established, it's time to draw conclusions from the case study. Researchers often rely on case studies to answer questions that basic information and standard diagnostics cannot address. Study a Pattern One of the main objectives of a case study is to find a pattern that answers whatever the initial inquiry seeks to find. To keep our site running, we need your help to cover our server cost (about \$400/m), a small donation will help us a lot. But what is a case study and why are they helpful? Read on to learn all about case studies. Deep Dive into a Topic At face value, a case study is a deep dive into a topic. CHOCOLATE CELEBRATION EXPLORE THE WORLD OF CHOCOLATE When you're performing research as part of your job or for a school assignment, you'll probably come across case studies that help you to learn more about the topic at hand. Case study presentation is important because it legitimizes the body of research and opens the findings to a broader analysis that may end up drawing a conclusion that's more true to the data than what one or two researchers might establish. We are a non-profit group that run this website to share documents.
